# Chapter 1 About this document

## Intended readership

The I/B/E/S on Datastream manual is intended for use only by Thomson Reuters clients.

## In this document

The primary focus of this reference guide is to provide you with definitions of the data types available, the different methods of accessing the data, and a list of related data types. The information is presented in tables like this:

Mnemonic	Description	Mnemonics for other quarterly periods
I1DN	Number of INT1 estimates down since last monthly values	I2DN, I3DN, I4DN

This section is ordered by type of data - company related items, price related data and so on. Refer to the table of contents to find the page you need.

The glossary at the end of the guide gives additional information about terms used by I/B/E/S. A complete glossary of I/B/E/S terms is available for I/B/E/S customers directly from I/B/E/S.

## Feedback

IBES data types and their definitions are also available online through Thomson Reuters Datastream Navigator, Data type search. You can access Navigator through Datastream Advance.

Online documentation including the latest news on I/B/E/S products can be found on the Datastream Support Extranet - <http://extranet.datastream.com>

## Chapter 2 About I/B/E/S on Datastream

### What is I/B/E/S?

The Institutional Brokers Estimate System (I/B/E/S) provides investment professionals with a global database of analysts' forecast earnings per share, cash flow per share, dividends per share, and net profits per share plus additional measures such as sales, EBIT, EBITDA and recommendations for publicly traded corporations worldwide. Introduced in 1971 as a tool for investors in U.S. markets, I/B/E/S has expanded to 22,000 companies in more than 80 countries. I/B/E/S collects earnings estimates from analysts associated with 1,200 research firms globally.

### I/B/E/S on Datastream: what is available?

Datastream Premium Package subscribers will be able to access current I/B/E/S data (**18 months**) covering all 28 measures at no additional cost to the base package.

### Available Measures

Users will have access to 28 measures for multiple fiscal years, including EPS, sales and net income. A full list of available measures is listed below.

Earnings Per Share (EPS)	Revenue (SAL)
GAAP Earnings Per Share (GPS)	Earnings Before Interest, Taxes, Depreciation, and Amortization (EBD)
Earnings Before Goodwill (EBG)	Earnings Before Interest, Taxes, Depreciation, and Amortization per share (EBS)
Cash Flow Per Share (CPS)	Net Income (INC)
Book Value Per Share (BPS)	Earnings Before Interest and Taxes (EBT)
Cash Earnings Per Share (CSH)	Operating Profit (OPR)
Dividend Per Share (DPS)	Profit Before Taxes (PRE)
Funds From Operations (FFO)	Net Debt (NDT)
Long Term Growth (LTG)	Net Asset Value (NAV)
Target Price (PTG)	Enterprise Value (EVT)
Return on Equity (ROE)	Capital Expenditure (CAP)
Return on Assets (ROA)	Recommendations
Gross Margin (GRM)	12 month forward
Adjusted Funds From Operations (AFO)	Free Cash Flow Per Share (FCF)
Reported Net Income (NER)	Reported Pre-Tax Profit (PRR)
Tangible Book Value Per Share (TBV)	

## I/B/E/S History:

I/B/E/S's extensive historical forecast data dates back to 1976 for the US and 1987 for non-US. History is available globally for the full range of I/B/E/S forecast measures. For more information on how to gain access to I/B/E/S history please speak to your usual Thomson Reuters contact.

## Regional summary consensus estimates

Analysis by the following regional groupings is also available for the I/B/E/S summary consensus estimates product:

- Asia Pacific
- Canada
- Emerging markets
- Europe
- Japan
- Latin America
- USA

These are available:

- As updates only (on a similar basis to the EPS1 EPS2 and associated data types listed above)
- As updates and history, with history starting at the base date of each series
- As history only
- Additional Measures history

## I/B/E/S Global Aggregates

I/B/E/S aggregate their stock level forecasts into market and proprietary index level global aggregates. This is a separate service, described in the I/B/E/S Global Aggregates on Datastream Reference Guide. Please speak with your Thomson Reuters sales or support representative for more details.

## I/B/E/S Tear Sheet Reports

Datastream provides a range of fixed format reports for customers who have access to summary consensus earnings from I/B/E/S. The reports are based on the main principles of I/B/E/S data and are designed to be used as "snapshots" of companies. These reports are available in Datastream Advance from the Overview on a single series tab. The reports display the latest values where provided.

# Overview

The Overview tear sheet gives an overview of basic I/B/E/S earnings estimates for a company.

# Momentum

The momentum tear sheet gives an indication of earnings estimate direction over set periods.

## Update frequency

I/B/E/S monthly values are updated at the latest by close of business (EST) on the Tuesday following the third Friday of the month. The monthly update overwrites all previous monthly values and adds the latest month's values. The monthly update is a snapshot taken on the Thursday preceding the third Friday of every month at close of business in New York.

Weekly and daily updates are available but note that only a small proportion of stocks will have a change on any given day. All stocks will have a value applied on a weekly basis, based on Thursday data. Daily updates are available only if there was a change made to one of its values (other than price) on the previous day. If no change has been made, the latest data available will be for the previous Thursday. No history of weekly or daily updates is available. The I/B/E/S database is updated the next business day by approximately 0900 hrs GMT. Weekly data is updated over the weekend, available to view on Datastream on the Monday.

## Obtaining monthly I/B/E/S values on the Datastream research service

Below example clarifies the storage of monthly values. It shows a Time Series Analysis program output screen for Marks & Spencer Group, data type EPS1 - mean earnings per share for the next fiscal year:

In the above example, you can see that the values change on the I/B/E/S monthly production days (16 November, 14 December). The weekly and daily "latest" values are not stored historically but overwritten when a subsequent weekly value, daily change or the monthly production value is received.

## Requesting monthly data at different dates

Continuing to look at Marks and Spencer as above; if on January 24 you request the data for display on a monthly frequency, Datastream takes the data for this current date (January 24) and then values from the 24th day of each preceding month, so that you will see the following values:

January	38.99
December	38.84
November	38.75

Requesting the same data on January 1, Datastream takes data for the current date of 1st February and then data for the 1st of each preceding month so that you will see the following values:

January	38.84
December	38.75
November	37.73

This gives the appearance of the data being retrieved as one month late due to the shift on the previous month's value.

To ensure that monthly data is always displayed under the same month as the I/B/E/S production date, you must specify a START DATE which should be later than the 20th of the month and before the end of the month.

To ensure that monthly data is always displayed in line with the I/B/E/S production cycle, ignoring the weekly update, you must specify an START DATE of the 20th of the month. The data displayed will then be identical with that shown by other I/B/E/S historical products.

## Dummy Mnemonics to display the latest daily, weekly, and monthly values

A series has been set up to display the date of the last daily, weekly and monthly values (for both summary and aggregates). These mnemonics should be used in conjunction with the TIME data type.

MNEM	DS CODE	NAME
IDCT	31449W	Date of last daily updated IBES summary value
IBWT	31449X	Date of last weekly updated IBES summary value
IMCT	31450D	Date of last monthly updated IBES summary value

# Chapter 4 Market Driven Changes

## IFRS related changes

European Union (EU) regulations require most listed European companies to comply with International Financial Reporting Standards (IFRS) 1-5 for their consolidated financial statements, beginning with accounting periods starting on or after 1 January 2005. For companies with December year ends, IFRS first applies to periods ending 31 December 2005. The EU regulations also require one year of history (for financial years commencing in 2004) restated under the new rules when reporting 2005 annual results.

As part of the move to IFRS standards, EPS data, previously stated on a post-goodwill basis, must be restated on a pre-goodwill basis. This brings EPS data types into line with earnings before goodwill (EBG) data types. Going forwards, an increasing proportion of estimates for a given company will be on an IFRS basis. During the period in which estimate contributors are making the transition from pre-IFRS to IFRS, mean estimates will be calculated for all measures based on both pre-IFRS estimates and IFRS estimates, with the default means always reflecting the majority of contributor submissions.

Thomson Reuters is therefore implementing the following changes:

- The history for the EPS data types has been converted to equate to earnings before goodwill (EBG) data as far back as EBG data was available for each company.
- The history for the EPS data types that predates EBG data availability has been left as EPS (post goodwill) data.
- Total EPS history has been saved to a new set of data types with the same stem mnemonics and a ".O" suffix. For example, EPS1MN.O gives access to the mean value of all FY1 EPS estimates for a company, calculated on a post-goodwill basis. ".O" data types are listed under the relevant sections of this manual.
- EBG data types will transition to displaying majority IFRS data at the same time as the EPS data types.
- A set of pre-IFRS mean data types is available, with the default history up to the point at which the majority of contributor estimates become IFRS estimates. After this point, pre-IFRS means will continue to be calculated for as long as estimates on a pre-IFRS basis are available. These data types have the same stem mnemonics as existing data types, but with a ".G" suffix. For example, SAL1.G will return mean sales for FYI based on estimates made on a pre-IFRS basis.
- A set of IFRS mean data types will start to be populated for a company as IFRS estimates become available, and will continue to be available after the point at which the majority of contributor estimates become IFRS estimates. These data types have the same stem mnemonics as existing data types, but with a ".I" suffix. For example, SAL1.I will return mean sales for FYI based on estimates made on an IFRS basis.
- A set of IFRS specific data types is available to return details about the transition from post-goodwill to pre-goodwill calculation, and to enable you to identify those exceptional cases where EPS is in line with a fully reported definition.

Existing EBG data types will continue to be updated with the same pre-goodwill data as EPS data types and after the transition these will be updated with IFRS data.

## IFRS specific data types

Data types with a ".G" suffix return mean values calculated from estimates on a pre-IFRS basis.

Data types with a ".I" suffix return mean values calculated from estimates on an IFRS basis.

Mnemonic	Description
<b>EBGDT</b>	A static data type returning the date of the transition from post-goodwill calculation of earnings per share to pre-goodwill calculation
<b>IFRSDT</b>	A static data type returning the date after which IFRS estimates are in the majority for a company
<b>Ebase</b>	A test time series data type returning: <ul style="list-style-type: none"> <li>“EPS” for the period up to transition from pos-goodwill calculation of earnings per share to pre-goodwill calculation</li> <li>In exceptional cases where EPS is in line with a fully reported definition, Ebase returns “EPS” throughout the history of the data type until the transition to IFRS.</li> <li>“EBG” for the period after the transition from post-goodwill calculation of earnings per share to pre-goodwill calculation</li> <li>“IFRS” after the transition to the IFRS basis for calculation of default mean estimates</li> </ul>
<b>EbaseN</b>	<ul style="list-style-type: none"> <li>A numeric time series data type returning “-100” for the period up to the transition from post-goodwill calculation of earnings per share to pre-goodwill calculation, and “0” for the period after the transition</li> <li>This data type can be displayed graphically or manipulated with Datastream functions.</li> </ul>

## Option expense

The Security and Exchange Commission’s ruling on the expensing of stock options – FAS123(R) for US publicly traded companies was introduced on December 16, 2004. This requires North American companies to calculate and amortize stock option expenses through the income statement for fiscal years beginning after June 15, 2005. Stock option expenses are only included in the EPS mean when the majority of contributing analysts have included the expenses in their estimates. With this in mind the following data types will enable clients to retrieve earning figures on both a majority and minority basis determined by whether the estimates include or exclude option expenses. Furthermore, users can retrieve the number of estimates contributing to either mean.

Mnemonic	Description	Mnemonics for other fiscal years
<b>Annual data types</b>		
<b>EPS1MN</b>	Mean value of all estimates for a company derived by the majority of contributing analysts	EPS2MN, EPS3MN, EPS4MN, EPS5MN
<b>EPS1MN.E</b>	Mean value of all estimates for a company (expenses in the estimate have been included)	EPS2MN.E, EPS3MN.E, EPS4MN.E, EPS5MN.E
<b>EPS1MN.X</b>	Mean value of all estimates for a company (expenses in the estimate have been excluded)	EPS2MN.X, EPS3MN.X, EPS4MN.X, EPS5MN.X

Mnemonic	Description	Mnemonics for other fiscal years
<b>EPS1NE.E</b>	Total number of estimates associated with the forecast that have included expenses in their estimates	EPS2NE.E, EPS3NE.E, EPS4NE.E, EPS5NE.E
<b>EPS1NE.X</b>	Total number of estimates associated with the forecast that have excluded expenses in their estimates	EPS2NE.X, EPS3NE.X, EPS4NE.X, EPS5NE.X
<b>OBASE1</b>	Option Expense Accounting Basis	OBASE2, OBASE3, OBASE4, OBASE5
<b>OBASEN1</b>	Option Expense Accounting Basis (numeric code)	OBASEN2, OBASEN3, OBASEN4, OBASEN5
	<b>Quarterly data types</b>	
<b>EPSI1MN.E</b>	Mean value of all interim estimates for a company (expenses in the estimate have been included)	EPSI2MN.E, EPSI3MN.E, EPSI4MN.E
<b>EPSI1MN.X</b>	Mean value of all interim estimates for a company (expenses in the estimate have been excluded)	EPSI2MN.X, EPSI3MN.X, EPSI4MN.X
<b>EPSI1NE.E</b>	Total number of estimates associated with the interim forecast that have included expenses in their estimates	EPSI2NE.E, EPSI3NE.E, EPSI4NE.E
<b>EPSI1NE.X</b>	Total number of estimates associated with the interim forecast that have excluded expenses in their estimates	EPSI2NE.X, EPSI3NE.X, EPSI4NE.X

## Chapter 5 EPS data types

The mnemonics listed in the first column of this table are for fiscal year 1 data types. For other fiscal years change the "1" to a "2", "3", "4", or "5". For example F3CV is the mnemonic for the coefficient of variation of all the FY3 estimates. Available mnemonics for other fiscal years are listed in the Mnemonics for other fiscal years column. Descriptions are consistent across all fiscal years: for "FY1" substitute "FY2", "FY3", "FY4", or "FY5" in the descriptions given below.

Mnemonic	Description	Mnemonics for other periods
<b>EPS1</b>	Mean earnings per share for FY1 (next fiscal year end to be reported)	EPS2
<b>EPS1D</b>	Fiscal Year End for EPS1	EPS2D
<b>PE1</b>	<ul style="list-style-type: none"> <li>Price to earnings ratio for FY1</li> <li>Calculated as Datastream price/EPS1</li> </ul>	PE2
<b>EPS1MN</b>	Mean value for all FY1 estimates for a company (Same as EPS1)	EPS2MN,EPSF3MN,EPS4MN, EPS5MN
<b>EPS1YR</b>	<ul style="list-style-type: none"> <li>Fiscal year end of the next period to be reported</li> <li>Returned in either American (MM-DD-YY) or European (DD/MM/YY) format (same as EPS1D)</li> </ul>	EPS2YR, EPS3YR, EPS4YR,EPS5YR
<b>EPS1CV</b>	<ul style="list-style-type: none"> <li>Coefficient of variation of all the FY1 estimates</li> <li>A measure of the spread of the estimates in terms of the standard deviation</li> <li>Calculated according to the equation: <math>CV(\%) = (\text{EPS1SD}/\text{Absolute value of EPS1MN}) * 100</math></li> </ul>	EPS2CV, EPS3CV, EPS4CV,EPS5CV
<b>EPS1HI</b>	Highest value of all FY1 estimates for a company	EPS2HI, EPS3HI, EPS4HI,EPS5HI
<b>EPS1LO</b>	Lowest value of all FY1 estimates for a company	EPS2LO, EPS3LO, EPS4LO,EPS5LO
<b>EPS1MD</b>	Median value of all FY1 estimates for a company	EPS2MD, EPS3MD, EPS4MD,EPS5MD
<b>EPS1SD</b>	Standard deviation of all the FY1 estimates that make up the consensus	EPS2SD, EPS3SD, EPS4SD,EPS5SD
<b>EPS1PER</b>	<ul style="list-style-type: none"> <li>Calculated PE ratio using I/B/E/S price data and FY1 mean estimate</li> <li>I/B/E/S price data may not be updated daily.</li> <li>If the earnings estimate is negative the PER is not calculated – a value of 'N/A' is returned <math>\text{EPS1PER} = \text{IBP}/\text{EPS1MN}</math>.</li> </ul>	EPS2PER, EPS3PER, EPS4PER,EPS5PER
<b>EPS1FD12</b>	12 month forward earnings per share	
	<b>Estimates and Actuals on a calendar year basis Where ## is replaced by an YY date</b>	
	<b>Actuals</b>	
<b>A##EPS</b>	Actual value for Earnings Per Share for year ending '##'	
<b>Forecast</b>		

Mnemonic	Description	Mnemonics for other periods
<b>EPSE##MN</b>	Mean for estimate with year ending '##' (Static)	
<b>EPSE##MD</b>	Median for estimate with year ending '##' (Static)	
<b>EPSE##SD</b>	Standard deviation with estimate for year ending '##' (Static)	
	<b>Total Revision data types</b>	
<b>EPS1DN</b>	Number of FY1 estimates down since last monthly values	EPS2DN, EPS3DN, EPS4DN, EPS5DN
<b>EPS1DNW</b>	Number of FY1 estimates down since last week values	EPS2DNW, EPS3DNW, EPS4DNW, EPS5DNW
<b>EPS1DN4W</b>	Number of FY1 estimates down since the weekly values four weeks ago	EPS2DN4W, EPS3DN4W, EPS4DN4W, EPS5DN4W
<b>EPS1UP</b>	Number of FY1 estimates up since last monthly values	EPS2UP, EPS3UP, EPS4UP, EPS5UP
<b>EPS1UPW</b>	Number of FY1 estimates up since last week values	EPS2UPW, EPS3UPW, EPS4UPW, EPS5UPW
<b>EPS1UP4W</b>	Number of FY1 estimates up since the weekly values four weeks ago	EPS2UP4W, EPS3UP4W, EPS4UP4W, EPS5UP4W
<b>EPS1NET</b>	Total # of estimates (including those excluded from the Mean) associated with FY1 forecast	EPS2NET, EPS3NET, EPS4NET, EPS5NET
	<b>Revision data types within the mean</b>	
<b>EPS1XD</b>	Number of FY1 estimates in the Mean down since last monthly values	EPS2XD, EPS3XD, EPS4XD, EPS5XD
<b>EPS1XDW</b>	Number of FY1 estimates in the Mean down since last weekly values	EPS2XDW, EPS3XDW, EPS4XDW, EPS5XDW
<b>EPS1XD4W</b>	Number of FY1 estimates in the Mean down since the weekly values four weeks ago	EPS2XD4W, EPS3XD4W, EPS4XD4W, EPS5XD4W
<b>EPS1XU</b>	Number of FY1 estimates in the Mean up since last monthly values	EPS2XU, EPS3XU, EPS4XU, EPS5XU
<b>EPS1XUW</b>	Number of FY1 estimates in the Mean up since last weekly values	EPS2XUW, EPS3XUW, EPS4XUW
<b>EPS1XU4W</b>	Number of FY1 estimates in the Mean up since the weekly values four weeks ago	EPS2XU4W, EPS3XU4W, EPS4XU4W, EPS5XU4W
<b>EPS1NE</b>	Total Number of estimates in the mean associated with FY1 forecast	EPS2NE, EPS3NE, EPS4NE, EPS5NE

## Quarterly EPS

The mnemonics listed in the first column of this table are for the next quarterly period. For other fiscal periods change the "1" to a "2", "3", or "4". Available mnemonics for other quarterly periods are listed in the Mnemonics for other quarterly period column.

Mnemonic	Description	Mnemonics for other quarterly periods
<b>EPSI1CV</b>	<ul style="list-style-type: none"> <li>Coefficient of variation of all the INT1 estimates</li> <li>A measure of the spread of the estimates in terms of the standard deviation</li> <li>Calculated according to the equation: <math>CV(\%) = (I1SD/Absolute\ value\ of\ I1MN)*100</math></li> </ul>	EPSI2CV, EPSI3CV, EPSI4CV
<b>EPSI1DN</b>	Number of INT1 estimates down since last monthly values	EPSI2DN, EPSI3DN, EPSI4DN
<b>EPSI1DN4W</b>	Number of INT1 estimates down since the weekly values four weeks ago	EPSI2DN4W, EPSI3DN4W, EPSI4DN4W
<b>EPSI1DNW</b>	Number of INT1 estimates down since last weekly values	EPSI2DNW, EPSI3DNW, EPSI4DNW
<b>EPSI1HI</b>	Highest value of all INT1 estimates for a particular company	EPSI2HI, EPSI3HI, EPSI4HI
<b>EPSI1LO</b>	Lowest value of all INT1 estimates for a particular company	EPSI2LO, EPSI3LO, EPSI4LO
<b>EPSI1MD</b>	Median value of all INT1 estimates for a company	EPSI2MD, EPSI3MD, EPSI4MD
<b>EPSI1MN</b>	Mean value of all INT1 estimates for a company	EPSI2MN, EPSI3MN, EPSI4MN
<b>EPSI1NE</b>	Total number of estimates associated with INT1 forecast	EPSI2NE, EPSI3NE, EPSI4NE
<b>EPSI1SD</b>	Standard deviation of all the INT1 estimates that make up the consensus	EPSI2SD, EPSI3SD, EPSI4SD
<b>EPSI1UP</b>	Number of INT1 estimates up since last monthly values	EPSI2UP, EPSI3UP, EPSI4UP
<b>EPSI1UP4W</b>	Number of INT1 estimates up since the weekly values four weeks ago	EPSI2UP4W, EPSI3UP4W, EPSI4UP4W
<b>EPSI1UPW</b>	Number of INT1 estimates up since last weekly values	EPSI2UPW, EPSI3UPW, EPSI4UPW
<b>EPSI1YR</b>	<ul style="list-style-type: none"> <li>End date of quarterly period 1 (INT1)</li> <li>Relates to the quarterly period for which results are due to be announced</li> </ul>	EPSI2YR, EPSI3YR, EPSI4YR

## Historical long term growth

Mnemonic	Description
<b>YR5GTH</b>	<ul style="list-style-type: none"> <li>Historical five year growth</li> <li>The rate of change in reported earnings per share over the five year time intervals terminating on the date of the last fiscal period for which EPS have been announced</li> </ul>
<b>YR5STB</b>	A measure of stability of the last five years actual EPS values

## EPS forecasts by fiscal year - Time Series

In all the time series data types below ## is replaced by a YY date. For example, F09MN gives the mean for the forecasts with a fiscal year end in 2009.

Note that the F##xx data types do not pad on Datastream. This means that when downloading against a list, values will only be returned for those companies that have a yearend coincidental with the date for which you are running the enquiry.

These data types are similar to the F1 – F5 data types, but are referenced by fiscal year end date and not relative fiscal year. For example:

- EPS1MN represents the mean earnings forecast for the current fiscal year.
- EPS09MN represents the forecasts made for fiscal years ending in 2009.

These data types are available in a time series request.

Mnemonic	Description
<b>EPS##CV</b>	<ul style="list-style-type: none"> <li>Coefficient of variation of estimates for year ending '##'</li> <li>Calculated from F##SD and F##MN as for other coefficient of variation data types</li> </ul>
<b>EPS##FYI</b>	<ul style="list-style-type: none"> <li>Fiscal year indicator associated with fiscal year '##'</li> <li>For example in October 2005 F06FYI may return value of FY2 indicating that in October 05 the forecast associated with 2005 was FY2.</li> </ul>
<b>EPS##HI</b>	<ul style="list-style-type: none"> <li>Highest value of all estimates for year ending '##'</li> <li>The same data as EPSnHI but accessed by year end date and not data type</li> </ul>
<b>EPS##LO</b>	<ul style="list-style-type: none"> <li>Lowest value of all estimates for year ending '##'</li> <li>The same data as EPSnLO but accessed by year end date and not data type</li> </ul>
<b>EPS##MD</b>	<ul style="list-style-type: none"> <li>Median estimate for year ending in ##</li> <li>The same data as EPSnMD but accessed by year end date</li> </ul>
<b>EPS##MN</b>	<ul style="list-style-type: none"> <li>Mean estimate for year ending in '##'</li> <li>The same data as EPSnMN but accessed by year end date and not data type</li> </ul>
<b>EPS##NE</b>	<ul style="list-style-type: none"> <li>Number of estimates for fiscal year ending in ##</li> <li>The same data as EPSnNE but accessed by year end date</li> </ul>
<b>EPS##SD</b>	<ul style="list-style-type: none"> <li>Standard deviation of estimates for year ending '##'</li> <li>The same data as EPSnSD but accessed by year end date and not data type</li> </ul>
<b>EPS##YR</b>	<ul style="list-style-type: none"> <li>Fiscal year end date of the company for the requested year</li> <li>For example EPS93YR returns 31/12/93 for a company with a December year end.</li> </ul>

## Estimates and Actuals on a fiscal year basis - Static

Fiscal Year data types are available via static requests and retrieve the latest value for the fiscal year. These are an addition to the times series of fiscal year data types, extending to a larger set of measures for both estimates and actuals, please see "Additional Measures" for list of these data types. The estimates data types are for Mean, Median and Standard Deviation values.

In the below table ## is replaced by an YY date – for example, the actual value for EPS for 2006 can be retrieved using A06EPS. For the forecast estimates data types that identifies the measure i.e. 'F' for EPS and 'E' for a constant to indicate an estimate – for example, the forecast Mean value for EPS for 2006 can be retrieved using EPSE06MN.

### Actuals

Mnemonic	Description
<b>Actuals</b>	
<b>A##EPS</b>	Actual value for Earnings per share for year ending '##'
<b>Forecast</b>	
<b>EPSE##MN</b>	Forecast mean for Earning estimate for year ending '##'
<b>EPSE##MD</b>	Forecast median for Earning estimate for year ending '##'
<b>EPSE##SD</b>	Forecast standard deviation for Earning estimate for year ending '##'

## Actual annual EPS

The mnemonics listed in the first column of this table are for data types for the last fiscal year reported (FY0). For earlier fiscal years change the "0" to a "P1", "P2", or "P3". For example FP2EPS is the mnemonic for the reported annual EPS for the fiscal year two years prior to the last one reported (the year two years before FY0, which is FY-2). Available mnemonics for other fiscal years are listed in the Mnemonics for other fiscal years column. Descriptions are consistent across all fiscal years: for FY0 substitute "FY-1", "FY-2" or "FY-3" in the descriptions given below.

Mnemonic	Description	Mnemonics for other fiscal years
<b>F0EPS</b>	Reported annual EPS for the last fiscal year (FY0)	FP1EPS, FP2EPS, FP3EPS
<b>EPS0YR</b>	The end date of the fiscal year for the last reported EPS figure (F0EPS)	EPSP1YR, EPSP2YR, EPSP3YR

## Actual interim EPS

The mnemonics listed in the first column of this table are for data types for the last interim period reported (INT0). For earlier interim periods change the “0” to a “P1”, “P2”, or “P3”. For example IP2EPS is the mnemonic for the reported interim EPS for the interim period before that represented by IP1EPS (the period two before INT0, that is INT-2). Available mnemonics for other interim periods are listed in the Mnemonics for other interim periods column. Descriptions are consistent across all periods: for INT0 substitute “INT-1”, “INT-2” or “INT-3” in the descriptions given below.

Mnemonic	Description	Mnemonics for other fiscal years
I0EPS	Latest reported interim EPS	IP1EPS, IP2EPS, IP3EPS
<b>EPSI0YR and I0EYR</b>	<ul style="list-style-type: none"><li>The end date of the fiscal period for the last reported interim EPS figure (INT0).</li><li>Returned in either American (MM-DD-YY, use I0YR) or European (DD/MM/YY, use I0EYR) format</li></ul>	EPSIP1YR, EPSIP2YR, EPSIP3YR

## Restated Actuals

The following data types enable the retrieval of actual revisions within the mean that have been restated after the initial actuals have been announced. Further restated data types can be viewed under the Additional Measures section of this guide.

Mnemonic	Description	Mnemonics for other interim periods
	<b>Annual data types</b>	
<b>ROEPS</b>	Restated Annual EPS	RP1EPS, RP2EPS, RP3EPS,
	<b>Quarterly data types</b>	
<b>RIEPS</b>	Restated Interim EPS	RI1EPS, RI2EPS, RI3EPS, RI4EPS

## Chapter 6 Additional measures

A number of additional measures are available for 5 fiscal years plus the last reported values (where available). The table below indicates the measures that are available for each region. Please see the glossary for full details of these measures.

## Countries that display Non per Share (PS) items in billions

### Chile, Columbia, Indonesia, Japan, Korea, Venezuela

Here, clients can utilize data type IBUNIT; this returns a numeric value of either 1 for non per share data in millions or 1,000 for billions. This allows comparison of non per share measures across these markets.

The mnemonics for the data types are listed on the following pages. The mnemonics listed in the first column of each table are for fiscal year 1 data types. For other fiscal years change the "1" to a "2", or "3". For example, BPS2 is the mnemonic for the mean book value per share FY2. Available mnemonics for other fiscal years are listed in the Mnemonics for other fiscal years column. Descriptions are consistent across all fiscal years: for "FY1" substitute "FY2" or "FY3" in the descriptions given below.

## Adjusted Funds From Operations (AFO)

Mnemonic	Description	Mnemonics for other fiscal years
AFO1MN	Mean Adjusted Funds From Operations for FY1	AFO2MN, AFO3MN, AFO4MN, AFO5MN
AFO1D	Fiscal Year End for AFO1MN	AFO2D, AFO3D, AFO4D, AF05D
F0AFO	Last Reported Adjusted Funds From Operations	
AFO0YR	Fiscal Year End for F0AFO	
AFO1CV	<ul style="list-style-type: none"> <li>Coefficient of variation of all the FY1 estimates</li> <li>A measure of the spread of the estimates in terms of the standard deviation</li> <li>Calculated according to the equation: <math>CV(\%) = (AFO1SD/Absolute value of AFO1MN)*100</math></li> </ul>	AFO2CV, AFO3CV, AFO4CV,AFO5CV
R0AFO	Restated reported Adjusted Funds From Operations	
AFO1HI	Highest value of all FY1 estimates for a company	AFO2HI, AFO3HI, AFO4HI, AFO5HI
AFO1LO	Lowest value of all FY1 estimates for a company	AFO2LO, AFO3LO, AFO4LO, AFO5LO
AFO1MD	Median value of all FY1 estimates for a company	AFO2MD, AFO3MD, AFO4MD, AFO5MD
AFO1SD	Standard deviation of all the FY1 estimates that make up the consensus	AFO2SD, AFO3SD, AFO4SD, AFO5SD
AFO1FD12	12 month forward – Adjusted Funds From Operations	
	<b>Estimates and Actuals on a calendar year basis Where ## is replaced by an YY date</b>

## Recommendations

Recommendations are retrievable via both Static and Time Series requests.

Recommendations history is available from December 2005 going forward.

Mnemonic	Description
RECNO	Number of recommendations
RECCON	Recommendation consensus
RECTXT	Text field translation of RECCON

RECCON	RECTXT	RECCON Value	Definition
1	<b>SBUY</b>	Between 1 & 1.49	Strong Buy
2	<b>BUY</b>	Between 1.5 & 2.49	Buy
3	<b>HOLD</b>	Between 2.5 & 3.49	Hold
4	<b>UPRF</b>	Between 3.5 & 4.49	Under Perform
5	<b>SELL</b>	Between 4.5 & 5	Sell

## Price Target

Price Target data types are available under Static and Time series requests.

Listed below are Price Target data types.

Mnemonic	Description
PTMN	Price target mean value
PTNE	Price target number of estimates
PTHI	Price target high value
PTLO	Price target low value
PTUP4W	Price targets up in the last four weeks
PTDN4W	Price targets down in the last four weeks
PTUP1M	Price target up In Last Month
PTDN1M	Price target down In Last Month
PTMD	Price target median value
PTSD	Price target standard deviation

## 12 month forward growth rate

Mnemonic	Description
<b>EPS1FD12</b>	<p>Also referred to as “12 month forward EPS”</p> <p>Calculated on the fly from the mean values. The 12 month forward EPS for FY1 is calculated as follows:</p> $\text{EPS1FD12} = ((M \times F1) + ((12 - M) \times F2)) / 12$ <p>where:</p> <p>M = Number of month ends to end of current fiscal year. Note that the current fiscal year will be FY1 if the date is before FY1 year end, and FY2 if the date is after FY1 year end.</p> <p>F1 = Consensus earnings forecast for current fiscal year</p> <p>F2 = Consensus earnings forecast for next fiscal year</p> <p>This data type is particularly useful for time series analysis of earnings forecasts over recent history, especially where the period of measurement incorporates a fiscal year end.</p>
<b>AFO1FD12</b>	12 month forward AFO – Adjusted Funds for Operations
<b>BPS1FD12</b>	12 month forward BPS - Book Value per share
<b>CAP1FD12</b>	12 month forward CAP – Capital Expenditure
<b>CSH1FD12</b>	12 month forward CSH – Cash Earnings per share
<b>CPS1FD12</b>	12 month forward CPS - Cash Flow per share
<b>DPS1FD12</b>	12 month forward DPS - Dividends per share
<b>EBG1FD12</b>	12 month forward EBG – Earnings Before Goodwill
<b>EBT1FD12</b>	12 month forward EBT – EBIT
<b>EBD1FD12</b>	12 month forward EBD – EBITDA
<b>EBS1FD12</b>	12 month forward EBS – EBITDA per share
<b>EVT1FD12</b>	12 month forward EVT – Enterprise Value
<b>FCF1FD12</b>	12 month forward FCF – Free Cash Flow per share
<b>FFO1FD12</b>	12 month forward FFO - Funds for Operations per share
<b>GPS1FD12</b>	12 month forward GPS - GAAP per share
<b>GRM1FD12</b>	12 month forward GRM – Gross Margin
<b>NAV1FD12</b>	12 month forward NAV - Net Asset Value
<b>NDT1FD12</b>	12 month forward NDT - Net Debt
<b>INC1FD12</b>	12 month forward INC - Net Income
<b>NER1FD12</b>	12 month forward NER – Reported Net Income
<b>OPR1FD12</b>	12 month forward OPR - Operating Profit
<b>PRE1FD12</b>	12 month forward PRE - Pre-tax profit
<b>PRR1FD12</b>	12 month forward PRR – Reported Pre-tax profit
<b>PEFD12</b>	12 month forward PE - Price/Earnings
<b>ROA1FD12</b>	12 month forward ROA - Return on Assets

<b>ROE1FD12</b>	12 month forward ROE - Return on Equity
<b>SAL1FD12</b>	12 month forward SAL – Sales
<b>TBV1FD12</b>	12 month forward TBV – Tangible Book Value per Share

## Forecast long term growth

Mnemonic	Description
<b>LTDN</b>	Number of long term growth estimates down in the last month
<b>LTDNW</b>	Number of long term growth estimates down since last weekly values
<b>LTDN4W</b>	Number of long term growth estimates down since the weekly values four weeks ago
<b>LTHI</b>	Highest value of the long term growth estimates
<b>LTLO</b>	Lowest value of the long term growth estimates
<b>LTMD</b>	<ul style="list-style-type: none"> <li>Median long term growth estimate</li> <li>A composite estimate of the anticipated annual growth rate in EPS over a five year period</li> </ul>
<b>LTMN</b>	<ul style="list-style-type: none"> <li>Mean long term growth estimate</li> <li>The mean of all long term growth estimates, expressed as a percentage</li> <li>Note: I/B/E/S place more importance on the median for long term growth</li> </ul>
<b>LTNE</b>	Total number of long term growth estimates
<b>LTSD</b>	Standard deviation of the long term growth estimates
<b>LTUP</b>	Number of long term growth estimates up in the last month
<b>LTUP4W</b>	Number of long term growth estimates up since the weekly values four weeks ago
<b>LTUPW</b>	Number of long term growth estimates up since last weekly values

## Surprise earnings data types

Surprise earnings data types are only available for companies that have quarterly data coverage. Only the current values of these data types are held – no history is maintained.

Mnemonic	Description
<b>SUE</b>	<ul style="list-style-type: none"> <li>Standardized Unanticipated earnings Score</li> <li>Ratio of the absolute surprise to estimate dispersion</li> <li>Measure of the distance between the two values in terms of standard deviation of the estimates</li> </ul>
<b>SURDT</b>	<ul style="list-style-type: none"> <li>Interim surprise date</li> <li>The date on which the latest interim earnings were announced</li> </ul>
<b>SURMN</b>	<ul style="list-style-type: none"> <li>Interim surprise mean EPS</li> <li>The last I/B/E/S estimate for the quarter that has just been reported</li> </ul>

Mnemonic	Description
<b>SURPD</b>	<ul style="list-style-type: none"> <li>Surprise Difference</li> <li>The absolute difference between the latest interim EPS and the last estimate EPS for the period</li> </ul>
<b>SURPP</b>	<ul style="list-style-type: none"> <li>Percentage surprise</li> <li>The percentage difference between the latest interim EPS and the last estimated EPS for the period</li> </ul>
<b>SURSD</b>	<ul style="list-style-type: none"> <li>Interim surprise standard deviation</li> <li>The standard deviation of all estimates that make up the interim surprise mean (SURMN) for the quarter just reported</li> </ul>

## Flash estimates

Flash estimates are based on the estimates received by I/B/E/S in the most recent weeks. They give a more up to date picture, reflecting the most recent views of analysts.

The mnemonics listed in the first column of this table are for fiscal year 1 ("F1..") or interim period 1 ("I1.."). For other fiscal years change the "1" to a "2". For interim periods change the "F" to an "I". For example EPS2FNE is the mnemonic for the total number of FY2 EPS estimates received in the last four weeks; EPSI1FMN is the mnemonic for the mean of all INT1 estimates received in the last four weeks. Available mnemonics for other fiscal years and interim periods are listed in the Mnemonics for other fiscal years and interim periods column. Descriptions are consistent across all periods: for FY1 substitute "FY2", "INT1" or "INT2" in the descriptions given below.

Mnemonic	Description	Mnemonics for other fiscal years and interim periods

<b>SPLDTE</b>	The date on which a stock split occurred
<b>SPLFCT</b>	The adjustment factor applied to the stock's per share values as a result of a stock split

## Chapter 6 Glossary

This glossary is intended to aid your understanding of the financial and statistical data types, included or derived, in the I/B/E/S database. The definitions are arranged alphabetically by name. Where appropriate, related data types are given in brackets after the glossary entry. Linked terms within a definition indicate that the term is itself defined in the glossary.

Term	Definition
<b>Absolute Surprise</b>	See Unanticipated EPS
<b>Annualized Dividend Rate (ANDIV)</b>	An indicated annual dividend payment based on the last quarterly dividend. The Annualized dividend rate is calculated by multiplying the last quarterly dividend declared by four, plus recurring extra or special year-end dividends. The Annualized dividend rate has empirical validity for a company that pays a consistent amount regularly.
<b>Average EPS Estimate (EPS1MN, EPS2MN etc.)</b>	A composite forecast of earnings per share that distils all available Current EPS estimate data for the specified fiscal time period into a single expectation. Gains from combining security analysts' forecasts arise from using more information in the aggregate than is used by any individual, and from the reduction of individual analysts' forecasts error through diversification. The Average EPS estimate is commonly known as the "consensus forecast". It is calculated by the adding the Current EPS estimate data for the specified fiscal time period from all Contributing Firms and dividing this figure by the number of EPS estimates that enter into the calculation.
<b>Adjusted Funds For Operations (AFO)</b>	The Adjusted Funds from Operations (AFFO) of a Real Estate Investment Trust (REIT), though subject to varying methods of computation, is generally equal to the trust's funds from operations (FFO) with adjustments made for recurring capital expenditures used to maintain the quality of the REIT's underlying assets. Thomson Reuters will consider Funds Available for Distribution (FAD), Cash Available for Distribution (CAD) and Adjusted Funds from Operations (AFFO) to be used interchangeably.
<b>Book Value Per Share (BPS)</b>	Book Value Per Share is the net asset value of a company's securities, expressed in per share terms. The calculation of BPS in general form involves taking the total assets of a company and subtracting all intangible assets as well as current and long-term liabilities and dividing by the weighted average number of shares outstanding.
<b>Calendarised Amount</b>	An aggregate number for the specified data item. Because the annual accounting period is not the same for all companies, a calendarisation procedure is used to enhance the comparability of the company data that is being aggregated. Depending on the calendar month of production and the current fiscal year end date for the Company, the average EPS estimate for the Current fiscal year is assigned to either the previous, present, following, or succeeding calendar year time period.
<b>Capital Expenditure (CAP)</b>	Funds used by a company to acquire or upgrade physical assets such as property, industrial buildings, or equipment or the amount used during a particular period to acquire or improve long term assets such as property, plant, or equipment.
<b>Cash Earnings Per Share (CSH)</b>	Cash Earnings per Share is a company's net income, plus depreciation, plus amortization of goodwill, intangibles, and prepaid assets (non-cash items), divided by weighted or diluted number of shares outstanding. Thomson Reuters provides both expected and actual CSH data (where available).

<b>Cash Flow Per Share (CPS)</b>	A corporation's cash flow from operations, before investing and financing, divided by the weighted average number of common shares outstanding for the year. Investing includes the sale or purchase of land, factories, buildings etc. Financing includes dividend payments, loan proceeds and sale of stock. I/B/E/S expects to provide both actual and expected CPS data where available.
<b>Change in the current EPS estimate</b>	The difference between the Current EPS estimate for the specified fiscal time period and the amount for the data item on the previous month's production date.
<b>Coefficient of Variation (EPS1CV etc.)</b>	A measure of the relative scatter, about the Average EPS Estimate, in the values for the Current EPS estimates for the specified fiscal time period. For a Company, it is the ratio of Estimate Dispersion to the Average EPS estimate. The generalised form of the equation used to calculate the coefficient of variation is: Coefficient of variation % = (Standard deviation/Absolute value of mean) * 100
<b>Company (NAME)</b>	The name of the individual firm that is the issuer of the equity security contained in the I/B/E/S database.
<b>Consensus Forecast</b>	See Average EPS Estimate.
<b>Consolidated Earnings Per Share (PNTCON)</b>	A measure of profitability of a group of affiliated corporations that treats the group as a single unit. The net income from operations of the parent Company, of subsidiaries, and of firms in which the parent Company holds more than 20%, enters into the computation of Consolidated earnings per share. Whenever it is appropriate, all Current EPS estimates reflect the outlook for Consolidated earnings per share only in order to maintain their comparability.
<b>Country (IBCTRY)</b>	The nation where the corporate headquarters for the Company is located.
<b>Currency (IBCUR)</b>	The monetary unit in which the earnings per share forecasts, results and other related fiscal data are stated. The codes issued by the International Standard Organization (ISO) are used to identify the currencies in most cases.
<b>Current Fiscal Year (EPS1YR)</b>	The accounting period of twelve months regarded as the latest because there has not yet been an announcement of the Company's annual fiscal results, even though the Company may have already closed its books.
<b>Dilution Factor (DILFCT)</b>	A measure of the difference between primary and fully diluted earnings per share amounts. The Dilution factor is expressed as a percentage and is the ratio of Last Fiscal Year to a recalculation of the Last fiscal year EPS by converting all convertible securities. Whenever it can be shown that the basis for the Current EPS estimate for the Company is inconsistent with the others that are available, it is adjusted by the amount of the Dilution factor to enhance its comparability.
<b>Dividends Per Share (DPS)</b>	A corporation's common stock dividends on an annualised basis, divided by the weighted average number of common shares outstanding for the year. In the U.S. DPS is calculated before withholding taxes. For some non-U.S. companies DPS is calculated after withholding taxes. I/B/E/S provides both actual and expected DPS data where available.
<b>Downward Revision Rate</b>	A measure of pessimistic sentiment. The Downward revision rate is the ratio of the number of Current EPS estimates for the specified fiscal time period that were reduced during the past month to the Number of EPS Estimates. The Downward revision rate is expressed as a percentage.

<b>Earnings Before Goodwill (EBG)</b>	EBG measures a company's per share earnings before the amortization of goodwill. In some countries (France, for example) goodwill is treated as a part of ordinary income for companies and the amortized component of goodwill is added back to yield earnings before goodwill amortization. This is distinguished from the EPS measure, which is earnings per share that always deducts the goodwill amount and is thus an expression of per share earnings after goodwill amortization. EBG is thus a corporation's net income from continuing operations before goodwill amortization divided by the weighted average number of shares outstanding. I/B/E/S provides both expected and actual EBG data (where available).
<b>EBIT (Earnings Before Interest and Taxes)(EBT)</b>	Represents the earnings of a company before interest expense and income taxes paid. As such, EBIT is a gauge of corporate earnings before any debt servicing to creditors (including bondholders) and the payment of corporate taxes. It is calculated in general form by taking the pre-tax corporate income of a company, adding back interest expense on debt, and subtracting any interest capitalized. I/B/E/S provides both expected and actual EBIT data (where available). Displayed in whole number terms in millions or billions dependant on domicile of country.
<b>EBITDA (Earnings Before Interest, Taxes, Depreciation, and Amortization)(EBD)</b>	EBITDA gauges the raw earnings power of a company before debt servicing, corporate taxes, and any allowances made for depreciation and amortization costs the company faces. It is calculated in general form by taking the pre-tax corporate income of a company, adding back any depreciation and amortization costs charged, plus any interest expense on debt (subtracting any capitalized interest). I/B/E/S provides both expected and actual EBITDA data (where available). Displayed in whole number terms (millions).
<b>EBITDA (Earnings Before Interest, Taxes, Depreciation, and Amortization Per Share)(EBS)</b>	EBITDA per share represents EBITDA divided by the weighted average number of shares outstanding. Thomson Reuters provides both expected and actual EBS data (where available).
<b>Enterprise Value (EVT)</b>	Enterprise Value is calculated as market capitalization plus debt, minority interest and preferred shares, minus total cash and cash equivalents. Cash equivalents are defined as an item on the balance sheet that reports the value of a company's assets that can be converted into cash immediately. Examples of cash and equivalents are bank accounts, marketable securities and treasury bills. An Enterprise Value actual is calculated using the closing price at the end of the fiscal period.
<b>EPS Estimate Range (EPS1HI, EPS1LO etc.)</b>	A measure of the variation in the set of Current EPS estimates. The EPS estimate range is given by the highest Current EPS estimate and the lowest Current EPS estimate values.
<b>Estimate Dispersion (EPS1SD)</b>	A statistical measure of the scatter in the Current EPS estimate amounts for the specified fiscal time period. Estimate Dispersion is based on deviations of Current EPS estimates and is therefore expressed in the same units. It is the standard deviation of the variance in the Current EPS estimate for the specified fiscal time period.
<b>Expected EPS Long Term Growth Rate (LTMD)</b>	A composite forecast of the anticipated annual growth rate in earnings per share over the "longer term". The Expected EPS long term growth rate is the median or middle Current EPS estimate or by convention, the average of the two middle values. I/B/E/S Inc. requests that each Contributing firm focus on the five-year time interval that begins on the first day of the Current Fiscal Year and make their calculations based on projections of EPS before extraordinary items.
<b>Final Average EPS Estimate (SURMN)</b>	The Average EPS Estimate for the specified fiscal time period on the day prior to the Latest Interim Reporting Date for the Company.

<b>Fiscal Periods (FY0, FY1, FY2...)</b>	A company's last reported annual earnings period is referred to as FY0. The period end dates for all estimated periods are then based on FY0. If FY0 corresponds to the December 1996 year end, the FY1 mean estimate is for December 1997 and the FY2 mean estimate is for the period ended December 1998.
<b>Five Year Historical EPS Growth (YR5GTH)</b>	The average annual earnings per share growth for a company over the past five years. The average annual growth in EPS for the past five years is calculated by measuring the slope of a log-linear line fit to the reported earnings. It is expressed as a percentage. If quarterly data is available, the line is fitted to the last 21 observations of rolling four quarter EPS. The resultant growth (slope) is raised to the fourth power to obtain an annualized growth factor. If semi-annual data is available, the curve is fitted to the last 11 observations of the semi-annual data. The resultant growth (slope) is raised to the second power to obtain the annual growth factor. If only annual observations are available, the curve is fitted to the last 6 annual observations (5 time periods) and the slope is used to represent the growth factor. Zero and negative observations are excluded from the calculations.
<b>Five Year Historical EPS Stability</b>	<p>Five-year earnings per share stability measures the consistency of earnings per share growth over the past five years. The lower the number, the more uniform growth has been. Combined with earnings growth data, the stability figure provides a multi-dimensional view of earnings growth over the past five years. Earnings stability is calculated as the mean absolute percentage difference between actual reported earnings per share and a five year historical EPS growth trend line, expressed as a percentage of trend line earnings per share.</p> <p>The Five Year Historical EPS Stability is calculated as follows:</p> $Stability = \sum_{i=1}^{i=n} \left( \frac{\left  \frac{Earnings(x_i) - Trend(x_i)}{Trend(x_i)} \right }{n} \right)$ <p>where:</p> <ul style="list-style-type: none"> <li>Earnings(<math>x_i</math>) = actual reported earnings for occurrence <math>i</math></li> <li>Trend(<math>x_i</math>) = calculated earnings per trend line = <math>a * e^{b*x_i}</math> (trend point for the <math>i</math>th period)</li> <li>n = number of observations</li> </ul>
<b>Flash Mean EPS Estimate (EPS1FMN, EPS1FNE, EPS2FMN, EPS2FNE etc.)</b>	A composite forecast of earnings per share for those values of the Current EPS estimate for the specified fiscal time period that have been revised during the past four weeks. The Flash-mean EPS estimate for a Company is calculated by adding the Current EPS estimates for the specified fiscal time period that have been revised during the past four weeks, and dividing this sum by the Number of EPS Estimates that entered into the calculation. The accuracy of the Flash-mean EPS estimate is expected to be greater than other composite forecasts because it incorporates new information more effectively.

<b>Four Week Rolling Data.</b>	(EPS1DN4W, EPS1UP4W... EPS4DN4W, EPS4UP4W) All such data items are calculated using a rolling four week time frame, as described below. The I/B/E/S weekly cycle takes place on every Thursday. At that point, all one month ago values shift to reflect the state of the database as it existed on the Thursday exactly four weeks prior. One month percentage change values are then calculated by comparing the current data to this base number. For daily products, even though the current number may change as daily updates are received, the base number will remain the same until the next weekly run, when it will shift one week forward. For Example, if EPS revisions for a company are received on a Monday, the one month percent change in the mean is calculated by comparing the current mean and the mean as it existed four weeks AND two days prior. If additional revisions were received on Tuesday, the period would be four weeks and three days. Hence, if daily revisions are made on a company, the time period used in the one-month percentage change calculations may be greater than four weeks. However since the base period is re-set every Thursday, it will never reach five weeks. The number of estimates raised and lowered are calculated in the same manner. These estimates include all estimates which have been received, but which may have been excluded from the mean calculations for a variety of reasons such as using different accounting rules. The data types based on week on week change (EPS1DNW, EPS1UPW etc.) work in the same manner. The data types based on monthly changes (EPS1UP, EPS1DN etc.) are based on the change between I/B/E/S monthly periods and are updated on a monthly basis only. They are not updated on a daily basis.
<b>Free Cash Flow Per Share (FCF)</b>	A measure of financial performance calculated as operating cash flow minus capital expenditures, Free Cash Flow (FCF) represents the cash that a company is able to generate after laying out the money required to maintain or expand its asset base.
<b>Fully Diluted Earnings Per Share (DILFCT)</b>	A measure of Company profitability that shows the result of potential dilution on the computation of earnings per share amounts. Common stock equivalents whose conversion, exercise or contingent issuance is potentially dilutive, and the Number of shares outstanding enter into the computation of Fully diluted earnings per share. A Current EPS estimate is shown as a Fully diluted earnings per share amount whenever there is a need to maintain its comparability with the others for the Company.
<b>Funds From Operations (FFO)</b>	A measure used by real estate and other investment trusts to define the cash flow from trust operations. It is earnings with depreciation and amortization added back. A similar term increasingly used is Funds Available for Distribution (FAD), which is FFO less capital investments in trust property and the amortization of mortgages. I/B/E/S provides both expected and actual FFO data (where available).
<b>GAAP Earnings Per Share (Fully reported) (GPS)</b>	Fully Reported Earnings per Share are statutory or reported earnings per share, defined as net profit (on continuous activities) divided by the weighted average number of shares outstanding during the period. Where a company carries exceptional items or goodwill amortization, this measure is post-exceptional, post-goodwill. In North America this figure is referred to as GAAP Earnings per Share and is calculated according to Generally Accepted Accounting Principles (GAAP), which is reported in SEC filings. In countries that have adopted International Financial Reporting Standards (IFRS) this figure will include all items according to IFRS rules. Thomson Reuters provides both expected and actual GPS data (where available).

<b>Gross Margin (Gross Profit Margin) (GRM)</b>	A company's total sales revenue minus cost of goods sold, divided by the total sales revenue, expressed as a percentage.
<b>Growth Rate in EPS Through The Current Fiscal Year</b>	The rate of change in earnings per share over the five-year period that ends on the Current fiscal year end date. The Growth rate in EPS through the current fiscal year is derived by fitting a least squares growth line to the logarithms of 20 values of rolling annual earnings per share for each Company.
<b>Highest EPS Estimate</b>	The largest Current EPS estimate for the specified fiscal time period.
<b>Industry (IBIND)</b>	The description of the homogenous group of companies with similar business lines to that of the Company. I/B/E/S maintains its own proprietary classification system which segregates companies at three different levels (Sector, Industry, Group). Sectors are subdivided into Industries which are in turn subdivided into Groups. The U.S. Industries are loosely based on the S&P 500 industry classifications and the classification system for non-US companies is similar to the Morgan Stanley Capital Index. In addition, I/B/E/S provides several reports that are based on specialty classification schemes such as the Toronto Stock Exchange 300 and the Dow Jones Equity Index.
<b>Interim EPS (I1MN, I2MN etc.)</b>	The quarterly or semi-annual earnings per share for the Company that was announced for the specified interim fiscal time periods. Interim EPS is expressed in general on a primary basis excluding extraordinary items and discontinued operations, and is adjusted for all stock splits and dividends.
<b>Interim Period (I1YR, I2YR etc.)</b>	The accounting period of less than 12 months (typically quarterly or semi-annually) for the Company over which fiscal results are announced.
<b>Last Fiscal Year (F0YR)</b>	The previous accounting period of 12 months for which the books of the Company have been closed, and its annual fiscal results already announced.
<b>Last Fiscal Year EPS (F0EPS)</b>	The earnings per share for the Company announced for the Last Fiscal Year. Last fiscal year EPS is expressed in general on a primary basis excluding extraordinary items and discontinued operations, and is adjusted for all stock splits and dividends.
<b>Last Price (IPR)</b>	The most recent transaction price. Last price figures are rounded so that they can be expressed in terms of the nearest whole unit of the Currency.
<b>Latest Interim Reporting Date (SURDT)</b>	The date on which the latest announcement of interim earnings results was made. The date is expressed as day/month.
<b>Long Term Growth Forecasts</b>	Long Term Growth Forecasts are received directly from contributing analysts; they are not calculated by I/B/E/S. While different analysts apply different methodologies, the Long Term Growth Forecast generally represents an expected annual increase in operating earnings over the company's next full business cycle. In general, these forecasts refer to a period of between three to five years. Due to the variance in methodologies for Long Term Growth calculations, I/B/E/S recommends the median value for Long Term Growth Forecast as opposed to the mean value. The median value (defined as the middle value in a defined set of values) is less affected by outlier forecasts.
<b>Lowest EPS Estimate (EPS1LO, EPS2LO etc.)</b>	The smallest Current EPS estimate for the specified fiscal time period.

<b>Market Capitalization</b>	The aggregate value of all trading stock for the Company, whatever its ownership. It is calculated by multiplying Number of shares outstanding by Last Price. It is given in millions of currency units.
<b>Mean Absolute Deviation</b>	See Five Year Historical EPS Stability.
<b>Mean EPS Estimate (EPS1MN, EPS2MN etc.)</b>	<p>The arithmetic average of estimates for the fiscal period indicated. The mean is calculated as follows:</p> $\frac{\sum_{i=1}^n x_i}{n}$ <p>where:</p> <p style="text-align: center;">xi = individual analysts forecasts n = number of estimates</p>
<b>Median EPS Estimate (EPS1MD, EPS2MD etc.)</b>	The value that falls in the middle of the defined range of estimates when arranged in ascending order. That is, the value within the sample that has an equal number of estimates both greater and less than itself. If the sample has an equal number of estimates, it is the average of the two middle values. Median values are less affected by outlier forecasts than mean values.
<b>Naive Estimate</b>	See Growth Rate in EPS Through The Current Fiscal Year.
<b>Neglect</b>	A measure of the amount of sponsorship by the investment research community. Neglect is the ratio of Market Capitalization to the Number of EPS estimates. It is expressed in millions of dollars per estimate.
<b>Net Asset Value (NAV)</b>	Net Asset Value is the total book value of a company's securities. It is calculated in general form by taking the total assets of a company and subtracting the value of the company's intangible assets (goodwill, patents, etc.) minus current and long-term liabilities. NAV is helpful in determining underpriced equities by indicating the ultimate value of a company's securities in the event of their liquidation. I/B/E/S provides both expected and actual NAV data (where available).
<b>Net Debt (NDT)</b>	Net Debt is calculated as short and long term interest bearing debt minus cash. Net debt is used to give an overall picture of a company's debt situation by applying cash against debt. I/B/E/S provides both expected and actual net debt data (where available).
<b>Net Income (INC)</b>	Net income is defined as a corporation's after-tax income. This item varies significantly from market to market as regards the inclusion or exclusion of non-recurring items. In most markets, non-recurring items are backed out of net income and this measure is restricted to income from continuing operations only (also referred to as normalized income). Some markets (Japan, for example) apply reported net income, including any and all extraordinary items. Recent accounting changes in still other markets (particularly Southeast Asia) have resulted in a reclassification of extraordinary versus exceptional items, bringing many formerly extraneous items above the net income line. I/B/E/S provides both expected and actual net income data (where available).
<b>Reported Net Income (NER)</b>	The net income earned after deducting all expenses including operating and non operating, interest expense and income and taxation. It is inclusive of all amortization and one-time charges. Also referred to as Net Profit Reported.
<b>Next Fiscal Year (F2YR)</b>	The accounting period of 12 months that follows the Current fiscal year for the Company. The end date of a company's Next fiscal year is expressed as month/year.
<b>Number of EPS Estimates (EPS1NE, EPS2NE etc.)</b>	The total number of estimates for a company for the specified time period.

<b>Number of Estimates Lowered</b>	The number of estimates that have been lowered (from their previous values) over the last week, four weeks, and month. New estimates and multiple estimate changes are not counted in this sum. For example, if during a four week period, an analyst raises their estimate from 1.50 to 1.90, and then lowers that estimate from 1.90 to 1.75, it is counted as one estimate lowered, because only the immediate prior estimate is used in the calculation.
<b>Number of Estimates Raised</b>	The number of estimates that have been increased (from their previous values) over the last week, four weeks, and month. New estimates and multiple estimate changes are not counted in this sum. For example, if during a four week period, an analyst lowers their estimate from 2.50 to 2.10 and then revises that estimate from 2.10 to 2.30, it is counted as one estimate raised, because only the immediate prior estimate is used in the calculation.
<b>Number of Shares Held (IBNOSH)</b>	A measure of the amount of common stock that can be publicly traded. For a U.S. Company, the Number of shares outstanding is the actual Number of shares outstanding less treasury stock. For a non-U.S. Company, the Number of shares outstanding is generally the actual Number of shares outstanding. The Number of shares outstanding is given in millions of shares.
<b>Operating Profit (OPR)</b>	Operating Profit is the difference between a company's revenues and its costs and expenditures arising directly out of a company's regular operations. Operating Profit is calculated before any deductions in income owing to non-operating activities (generally such items as interest expense, corporate tax payments, material gains or losses arising from changes in accounting policy, and the like) and excludes any income derived from outside the firm's regular activities. I/B/E/S provides both expected and actual OPR data (where available). Displayed in whole number terms (millions).
<b>Option Expenses</b>	The Security and Exchange Commission's ruling on the expensing of stock options – FAS123(R) for US publicly traded companies was introduced on December 16, 2004. This requires North American companies to calculate and amortize stock option expenses through the income statement for fiscal years beginning after June 15, 2005. Stock option expenses are only included in the EPS mean when the majority of contributing analysts have included the expenses in their estimates.
<b>Parent Company Earnings Per Share (PNTCON)</b>	A measure of the profitability of the parent Company that is the owner of a group of affiliated corporations. The net income from operations of the parent Company, and dividends, interests, royalties, etc. received from its subsidiaries enter into the computation of Parent company earnings per share. Whenever it is appropriate all Current EPS estimates reflect the outlook for Parent company earnings per share only in order to maintain their comparability.
<b>Pre-Tax Profit (PRE)</b>	Pre-tax profit is a company's net income before tax expense. Where applicable, extraordinary items and non-recurring charges are subtracted from net income. Thomson Reuters provides both expected and actual PRE data (where available). <ul style="list-style-type: none"> <li>• In Japan, companies compliant with Japan Accounting Standards use Recurring Profit.</li> </ul>
<b>Reported Pre-Tax Profit (PRR)</b>	The pre tax profit reported by the company inclusive of all amortization and one-time charges. Also referred to as Pre Tax Profit Reported. Excluding for one-off cases, the GAAP Pre Tax Profit excludes the effect of discontinued operations for all regions.
<b>Price Date (IBPDTE)</b>	The date on which the most recent transaction took place. The Price date is expressed as day/month.

<b>Price Range</b>	The absolute high and low price per share over the latest 52 week period.
<b>Price/Earnings Ratio (EPS1PER, EPS2PER etc.)</b>	A widely used stock evaluation measure. The Price/Earnings ratio is calculated by dividing the Last I/B/E/S price by the Average EPS Estimate for the specified fiscal time period.
<b>Primary Earnings Per Share (DILFCT)</b>	A measure of Company profitability that excludes all common stock equivalents whose conversion, exercise or contingent issuance is potentially dilutive in the computation of earnings per share amounts. A Current EPS estimate will be shown as a Primary earnings per share amount whenever there is a need to maintain its' comparability with the others for the Company. When the letter "D" does not follow the Dilution Factor or the Last Fiscal Year it indicates that Primary earnings per share amounts are being presented, or enter into the calculations.
<b>Production Cycles</b>	<p>There are several ways to refer to the I/B/E/S monthly cycle dates, all of which refer to the same date. The most frequent definitions of the I/B/E/S run date are:</p> <p>The Thursday that falls between the 14th and 20th of each month.</p> <p>The Thursday before the third Friday of the month.</p> <p>The Thursday of the week in which options expire.</p> <p>The rationale for this mid-month date comes from earlier days when most brokerage research was released by US Mail on the first of the month. The two week lead time was necessary to process, print and ship the data to clients. Today, information is processed overnight and delivered for the start of the next business day.</p> <p>The I/B/E/S weekly cycle ends on the Thursday of each week.</p>
<b>Recommendations</b>	As many brokers have different ratings, I/B/E/S maintains a standard set of recommendations, each with an assigned numeric value. Each recommendation received from the contributors is mapped to one of the I/B/E/S standard ratings. Assigning a numeric value to the broker text enables a consensus recommendation to be calculated. The consensus recommendation appears as the mean of the assigned values as well as text. The consensus text is determined by rounding the mean value to the nearest integer and matching it to the corresponding I/B/E/S text.
<b>Relative Surprise</b>	See Unanticipated EPS.
<b>Return on Assets (ROA)</b>	<p>Return on Assets is a profitability ratio and as such gauges the return on investment of a company. Specifically, ROA measures a company's operating efficiency regardless of its financial structure (in particular, without regard to the degree of leverage a company uses) and is calculated by dividing a company's net income prior to financing costs. I/B/E/S provides both expected and actual ROA data (where available).</p> $ROA \text{ (Return on Assets)} = \frac{\text{Net Income} + \text{After tax interest cost}}{\text{Average Total Assets}}$
<b>Return on Equity (ROE)</b>	<p>Return on Equity is another profitability ratio which gauges return on investment by measuring how effectual stockholder money is being employed by the company. ROE is calculated by dividing a company's net income by average total equity. Unlike ROA, ROE does consider the degree to which a company uses leveraging, as interest expense paid to creditors is generally deducted from earnings to arrive at Net Income.</p> <p>I/B/E/S provides both expected and actual ROE data (where available).</p> $ROE \text{ (Return On Total Equity)} = \frac{\text{Net Income}}{\text{Average Total Equity}}$

<b>Sales (SAL)</b>	<p>The Sales measure is a corporation's net revenue, generally derived from core business activities. For non-financial companies, the calculation of net revenue (or net turnover) in most markets generally involves subtracting transportation and related operational costs from gross revenue/sales. Revenue recognition practices vary significantly from market to market, though generally the recording of revenue is based upon sales invoices issued (or anticipated for forecast purposes) during the accounting period.</p> <p>For banks, revenue is generally defined as net interest income plus net non-interest income. Net interest income is defined as interest income minus interest expenses. Net interest income components generally include net interest earned on loans, reserve deposits and deposits with other banks, and net interest earned from interbank money market operations (IMMO) and marketable securities. Net non-interest income components generally include net income from fees and commissions, net gains from Capital market and foreign exchange operations, and net income earned from participations.</p> <p>For insurance companies, revenue is generally defined as net technical income plus net financial income. Net technical income is generally defined as technical income minus technical expenses. Technical income components generally include income from premiums and commissions received reinsurer's share of claims paid, transferred net technical reserves, and reinsurer's share of technical reserves. Net financial income is generally defined as financial income minus financial expenses. Net financial income components generally include net interest income, net dividend income, and net foreign exchange gains.</p> <p>I/B/E/S provides both expected and actual SAL data (where available).</p>
<b>Sector (IBSCT)</b>	<p>The description of a homogenous group of industries that make up a major subset of the market.</p> <p>I/B/E/S maintains its own proprietary classification system which segregates companies at three different levels (Sector, Industry, Group). Sectors are subdivided into Industries which are in turn subdivided into Groups. Both the US and non-US databases comprise 11 sectors. I/B/E/S also provides a special report for Canadian companies based on the sector breakdown of the Toronto Stock Exchange 300 which has 14 Sectors.</p>
<b>Standard Deviation</b>	<p>The statistical measure of dispersion of estimates for the fiscal period indicated. The standard deviation is the average variance from the mean expressed in local currency.</p> <p>The Standard Deviation is calculated as follows:</p> $\sqrt{\frac{\sum (x - \bar{x})^2}{n - 1}}$ <p>where:</p> <p style="text-align: center;">x = individual analysts estimate n = number of estimates</p>
<b>Standardized Unanticipated Earnings (SUE) Score</b>	See Unanticipated EPS.
<b>Tangible Book Value Per Share (TBV)</b>	The Tangible Book Value per Share is the company's Shareholders Equity excluding Minority Interests adjusted for certain items and divided by the Shares in Issue at Year End. While the Book Value per Share is provided on a reported or GAAP basis, Tangible Book Value per Share estimates would include adjusted BVPS estimates. The adjustments include revaluations of assets, exclusion of Accumulated other comprehensive income (AOCI), Embedded Value inclusions and others.

<b>Timely Composite Differential</b>	A measure of the amount of new information incorporated in more recent Current EPS estimate updates compared to older ones. The Timely composite differential is the ratio of the Company's flash mean EPS estimate for the specified fiscal time period to the Average EPS Estimate. It is expressed as a percentage.
<b>Trend Line EPS Forecast</b>	A mechanically determined forecast of earnings per share for the specified fiscal time period, based on the assumption that the future is a simple extension of the past. It is calculated by fitting a least squares growth line to the logarithms of the 20 most quarterly observations of last twelve month EPS. The Trend Line EPS Forecast is given by extrapolating the derived growth line to the end of the specified fiscal time period.
<b>Unanticipated EPS (SURPD, SURPP, SUE)</b>	<p>A measure of earnings surprise that shows the amount by which the latest announcement of earnings per share for the Company was better or worse than expected. Unanticipated EPS is derived by comparing the latest Interim EPS to the Final Average EPS Estimate for the interim period.</p> <p>Absolute surprise is calculated by taking the mathematical difference between the two data items.</p> <p>Relative surprise is calculated as the percentage difference between the two data items.</p> <p>A third gauge, called the Standardized Unanticipated Earnings (SUE) score is calculated as the ratio of absolute surprise to Estimate Dispersion. The SUE score measures the number of standard deviations the actual (reported) earnings that differ from the I/B/E/S surprise mean estimates for a company for the fiscal period indicated. SUE can be used to make probability statements about the likelihood of that particular result occurring. The SUE score is calculated as follows:</p> $SUE = \frac{Actual\ EPS - Surprise\ mean\ EPS}{Standard\ deviation}$
<b>Upward Revision Rate</b>	A measure of optimistic sentiment. The Upward revision rate is the ratio of Current EPS estimate amounts for the specified fiscal time period that were increased during the past month to the Number of EPS Estimates. It is expressed as a percentage.
<b>Yield</b>	A measure of the rate of return on annual cash dividend income. Yield is the ratio of the Annualized Dividend Rate to the Last Price for the Company and is expressed as a percentage.
